PROFESSIONAL SUMMARY

Computer Science Engineering graduate skilled in Python, OpenCV, DeepStream, and ThingsBoard. Experienced in iTransformer-based time-series forecasting, real-time people detection using OpenCV, and building basic IoT and video analytics pipelines. Quick learner with strong problem-solving skills, eager to contribute to a dynamic engineering team.

TECHNICAL SKILLS

- **Programming Languages** : JavaScript , C++ , HTML , CSS , PYTHON
- **Frontend** : HTML , CSS , REACT JS
- **AI Computer Vision** : OpenCV , DeepStream , Visual REID
- **Machine Learning / Forecasting** : iTransformer
- **IoT Platform** : ThingsBoard
- **Version Control** : Git , Github

EXPERIENCE

- **Software Engineer Trainee** *Perinthalmanna*
Inthings Technologies Pvt Ltd *Sept 2025 - Present*
 - Proficient in Python, OpenCV, and DeepStream for building real-time video analytics and people-detection systems.
 - Worked on time-series forecasting using the iTransformer model and developing AI-driven analytics solutions.
 - Strong foundation in problem-solving, debugging, version control (Git/GitHub), and collaborative development environments.

PROJECTS

- **Person Re-Identification System (OpenCV + Embedding Model) :** *Oct 2025*
 - Developed a person re-identification system using detection, feature extraction, and embedding generation to match individuals across multiple cameras.
 - Implemented bounding-box detection, embedding creation, and similarity scoring (cosine similarity) to identify whether the same person appears in different camera feeds.
- **Time-Series Forecasting (iTransformer Model):** *Sep 2025*
 - Built a multivariate forecasting system using the iTransformer model to predict temperature and humidity for multiple IoT devices.
 - Preprocessed 36,000+ high-frequency data points (5-min interval), engineered time features, and generated 30-day long-horizon predictions with high accuracy.
- **Classification of EEG Signals: [Mini Project]** *Jan 2024-May 2024*
 - Created a machine learning model to classify different stages of seizure using Random Forest and K Means clustering in Python.
 - Preprocessed EEG data to extract relevant features for classification
- **Automated Exam Paper Evaluation: [Main Project]** *Aug 2024-Apr 2025*
 - Developed an AI-powered system to automate handwritten exam paper evaluation using OCR and NLP techniques for semantic answer assessment.
 - Implemented handwriting recognition using DTrOCR and integrated GPT-based models for accurate, context-

aware grading and feedback generation.

EDUCATION

- **Sreepathy Institute Of Management And Technology (SIMAT)**

Oct 2021 – May 2025

Bachelor of Technology in Computer Science And Engineering

- GPA: 7/10

- **Khss Thottara**

Jun 2019 – Mar 2021

Higher Secondary Education in Computer Science Stream

- Percentage: 94

PUBLICATIONS

- **Classification of EEG Signals**

Jan 2025

- Published in the proceedings of CEMC2024, organized by IDES and Grenze Scientific Society.
- Authored and presented a paper on EEG signal processing and machine learning applications in biomedical research.
